

Statement of Work (SOW)

GrowPet Platform — Smart Care for Happy Pets

Document Type: Comprehensive SOW & Delivery Report

Status: Production Live

Version: 1.0 Final

1. Executive Summary

The **GrowPet Platform** is an advanced, comprehensive multi-species pet wellness and management web application. Designed to cater to a diverse array of animal companions—ranging from conventional mammals (dogs, cats) to avian species, fish, reptiles, amphibians, and exotic animals—GrowPet bridges the gap between daily pet care execution and professional veterinary insights.

This Statement of Work (SOW) outlines the functional modules, architectural design, technology stack, development milestones, and live production deployment details for the GrowPet platform.

Live Production Environment: The fully operational platform is deployed and accessible at

`https://edunova-b432b.web.app`

2. Comprehensive Functional Modules

The GrowPet platform is built with modular, highly responsive components designed for optimal user experience across desktop and mobile devices.

Module Name	Core Capabilities & Features
Universal Profiles	Smart species photo auto-matching, extensive preset gallery for common and exotic pets, custom device file uploads, and individualized tracking parameters per pet.
Care Routine Engine	Auto-generated species-specific care checklists (feeding, habitat maintenance, exercise, supplementation), streak counter to encourage consistency, and dynamic pet happiness score calculation.
AI Vet Assistant	Species-aware intelligent triage, nutritional recommendations, behavioral analysis, and immediate emergency guidance tailored to specific animal physiology.
GPS Vet Locator	Dual GPS positioning with IP fallback, city search capabilities, interactive distance calculator, and direct integration with Google Maps for turn-by-turn directions to emergency clinics.

Module Name	Core Capabilities & Features
Medication & Health Vault	Precise dose log timestamps, comprehensive weight and vitals history tracking, vaccination reminders, and exportable health logs for veterinary visits.
Price Comparison	Integrated budget tracker comparing food, supplies, and medication pricing across major retailers including Amazon, Chewy, Petco, PetSmart, and Walmart.
Passwordless Cloud Sync	Frictionless multi-browser real-time Cloud Firestore synchronization utilizing deterministic unique identifiers (UIDs) without complex registration hurdles.

3. Technology Stack & Architecture

GrowPet is engineered using a modern, performant, and scalable web technology stack to ensure lightning-fast load times, robust data integrity, and high availability.

Layer	Technologies & Frameworks
Frontend Framework	React 18 with TypeScript for type-safe component architecture.
Build Tooling	Vite for ultra-fast module bundling and hot module replacement.
Styling & Design System	Tailwind CSS utility-first framework for responsive, modern UI design.
Backend & Authentication	Firebase Auth (Anonymous & Passwordless configuration) for seamless access.
Database & Realtime Sync	Cloud Firestore NoSQL document store with live snapshot listeners.
Hosting & CDN	Firebase Hosting with global CDN distribution and automated SSL certification.

4. Development Milestones & Delivery Status

All development phases defined in the project scope have been successfully executed, rigorously tested, and deployed to production.

Milestone	Milestone Title	Key Deliverables	Status
M1	UI/UX Design System	Tailwind setup, color palettes, responsive layout framework, and navigation bar.	Complete
M2	Universal Profiles	Species auto-matching, photo gallery picker, and profile card components.	Complete

MILESTONE	MILESTONE TITLE	KEY DELIVERABLES	STATUS
M3	Care Routine Engine	Dynamic checklists, streak tracking algorithms, and happiness scoring logic.	Complete
M4	AI Vet & GPS Locator	Triage prompt templates, geolocation API integration, and Maps routing.	Complete
M5	Health Vault & Price Comparison	Vitals charting, medication timers, and retail price aggregation matrices.	Complete
M6	Cloud Sync & Firestore	Deterministic UID generation, real-time data synchronization, offline caching.	Complete
M7	Production Deployment	Firebase Hosting configuration, custom domain binding, and SSL provisioning.	Complete

5. Acceptance & Sign-Off

The GrowPet platform has met all acceptance criteria, passing functional, performance, and cross-device responsiveness evaluations. The live application is fully active and serving end-users globally.
